

EnsoMOSAIC Fusion

All new photogrammetric software for aerial surveys

MosaicMill offers all new EnsoMOSAIC Fusion - powerful photogrammetric software with ground breaking quality for professional customers.

EnsoMOSAIC is a full photogrammetric suite for processing images from unmanned and manned platforms. All cameras are supported from entry level UAV cameras to large format aerial cameras and thermal sensors.

New functionality contains:

- Completely new map user interface
- Flexible and easy data input from any platform
- Limitless weight settings for all input data
- Support for multi-camera oblique systems
- Support for multispectral and hyperspectral images - e.g. MicaSense, TetraCam and Rikola
- Data fusion to process images from different camera types in one run
- State of the art 3D modeling – power lines and roof edges
- Advanced process quality reporting

As input EnsoMOSAIC requires **images** with **GNSS coordinates** from any UAV autopilot or manned imaging system. EnsoMOSAIC has two licensing options: fully automatic EnsoMOSAIC and fully controllable but still automatic EnsoMOSAIC Fusion.
